

Training programme 2024

"from practice - to practice"

our expertise

Our trainings are rooted in more than 20 years of professional experience of our founder Mark Haacke.

Since the company was founded in 2019, our team has been developing training courses on licensing requirements and related subjects.

A team of engineers and lawyers always incorporates knowledge and insights from current projects in addition to the expertise and experience of their own professional history.

From the initial assessment of companies, through product approval and series monitoring, to market surveillance and recalls, we accompany a large number of companies from various sectors and can thus use knowledge in a scope and depth that no other competitor on the market can.

This is real "from practice - to practice"!

Our training programme is based on the product life cycle and offers the appropriate training and different levels of qualification for each phase.

our trainings

Product approval

- Approval procedure - Level 1
- GSR2 - General Safety Regulation
